

- Ideal For Strong Lightweight Tubular Structures
- Variety Of Diameters, Wall Thicknesses, And Braid Patterns
- Fast Turnaround On Custom Requirements

Scissors

Material

Polyacrylonitrile (PAN)

Grade

CAL, CAN, CAH

Wall Thickness

.013" - .030"

Drawing Number

TF001CAL-WD

Carbon Fiber Sleeve For High Strength Tubular Structures

Fabricators know that resin coated carbon fiber structures are stronger and lighter than virtually any other construction types. Carbon Fiber (CA) construction techniques are appearing in everything from state-of-the-art military and aerospace airframes to hockey sticks, fishing rods and model cars.

Our Carbon Fiber braided sleeving provides a strong, biaxial carbon fiber matrix for stiff, lightweight tubular structures up to 3" in diameter without seams or overlap. The tightly braided thick flexible sleeving will form itself to accommodate elliptical or asymmetrical profiles and provide the full coverage required for radial stability and torsional strength or hand tools.

Carbon fiber constructions can be cut, drilled, sanded and tooled with commonly available power or hand tools. Can be painted or left with the braid structure exposed.

Colors Available:
Black (BK)

FLAMMABILITY Rating _____ Non Flammable

Abrasion Resistance Medium

Abrasion Test Machine Taber 5150

Abrasion Test Wheel Calibrase H-18

Abrasion Test Load 500g

Room Temperature 70°F

Humidity **59%**

Visible Moderate Wear 20 Test Cycles

Material Completely Worn Through Material Destroyed 40 Test Cycles

Pre-Test Weight 3,450.9 mg

Post-Test Weight 2,551.7 mg

Test End Loss Of Mass Point Of Destruction 899.2 mg

1=No Effect 4=More Affected 2=Little Effect 5=Severely Affected 3=Affected

Esters/Keytones _	 1
UV Light	2

Monofilament Diameter ASTM D-204	N
Recommended Cutting	Scisso
